

# SafeDispatch Mobile™

## Your First Mobile Command & Control Center For Android Cell Phones & Tablets

SafeDispatch Mobile™ Software provides remote access to your MOTOTRBO® (DMR) and/or TETRA radio fleets via IP networks and is designed primarily to function as an Android-based mobile dispatch center, with a number of voice & data capabilities including:

- ◆ Private or Group Calls to your radios
- ◆ Real-time Location of GPS capable radios
- ◆ Text Messaging
- ◆ E-mails
- ◆ Telemetry

Private, Group or All Calls are easy to make with an IP connection. Simply make a selection from the subscriber list and then click the Push-to-Talk button.

Various data can be exchanged between multiple Android cell phones or tablets running the SafeDispatch Mobile™ software and the radios in the field.

When outside of the radio coverage area, SafeDispatch Mobile™ can still be used to communicate with the radio system and to remote monitor the radio channels via the IP network.
