

# SafeDispatch LITE

application for MOTOTRBO

SafeDispatch LITE is an easy-to-use desktop application provided by SafeMobile, that enables the dispatchers to effectively communicate with the radios in the field from their computer in the office. SafeDispatch LITE offers an easy way to send/receive text messages to/from radio users either by using the SafeDispatch interface or by just using an email account. Dispatchers can organize their fleets into groups or subgroups of units and can predefine text messages for each group or for the entire fleet. Sending messages to radio users couldn't be easier!

## Text Messaging Suite

SafeDispatch lite is enhanced with text messaging capability that allows for SMS communication between the radio and the dispatcher. The dispatcher can send messages to any radio or group of radios and can also receive messages from radios in a dedicated Inbox and Outbox screen in SafeDispatch.

The most popular features such as create, delete, forward and predefine text messages are available just a click away.

- + Caller ID
- + Call History

## E-mail Suite

The E-mail Module allows radios to send messages to any email address and to receive messages sent from an email address. This function enables the dispatcher to communicate with the staff from his computer at home without having to run the SafeDispatch application from his computer.

**Ordering & shipping:** The SafeDispatch LITE application ships on a registered SafeMobile dongle to customers around the world. The SafeMobile dongle contains the license for the software and is required to be plugged into the USB port of the computer on which SafeDispatch LITE is installed. For special customization of the system we provide special quotes and shipping times as per customer request.

## Available languages: English

Upon customer request, SafeDispatch LITE can be easily translated into any language.
